John I. Thompson & Company

JOHN I. THOMPSON & COMPANY (JITCO) is a professional scientific organization which was founded in 1943. The company performs electrical, mechanical, and industrial engineering services for all major industries and the U.S. Government. It specializes in methods for manufacture and distribution, scientific and industrial management, and engineering and applied research studies.

FACILITIES

Executive and main engineering offices are located in Washington, D.C., near the White House. This location houses management and engineering staff, technical library, graphics studio, photographic laboratory, and model shop.

Also in Washington, D.C., at 1111 N. Capitol Street, is an industrial plant where the Company operates the Air Force Publications Distribution Center. This facility has extensive electronic data processing equipment which is used as needed on any company project.

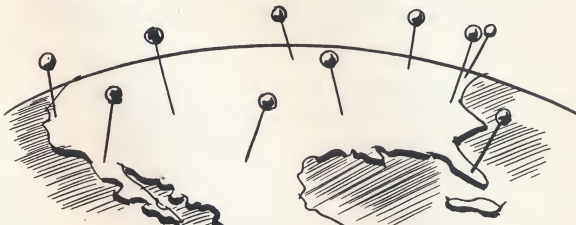

At Bellefonte, Pennsylvania, near The Pennsylvania State University, is an engineering office which employs many members of the University Staff. Facilities here include engineering offices, drafting rooms, and assembly and benchwork facilities for research, development, and evaluation projects. An electronic and environmental testing laboratory is also located here.

Our Southeastern Operations Office in Orlando, Florida, provides clients in Florida and nearby states with scientific, shop, and graphic services.

STAFF

JITCO maintains a staff of about 100 engineers and scientists to carry out its engineering and research work, while the total staff numbers about 400. Detailed resumes of staff members and their experience are furnished on request.
